As this dictionary is a compilation, we gratefully acknowledge the authors whose names appear in the list of references. Special appreciation is expressed to Elbert L. Little Jr., Jean-Paul Lanly and Guoying Xu for their guidance and helpful criticism during the preliminary discussions, to all collaborators and reviewers, to Elbert L. Little Jr., Norman Dignard, Louis Parrot, Pierre Bellefleur, Yves Aubry, Tecsalt inc. and Herbier Louis-Marie, who helped us with floras, to Brenda J. McAfee, Camille Gervais† and Alexandre Strachan for checking the English text and to Rina Terstall and Linda Versteeg at Elsevier for their kindness, patience and understanding.

This work was supported in part by the Ministère de la main-d'oeuvre et de la sécurité du revenu du Québec (EXTRA and PAIE programs), by the Direction de la conservation et du patrimoine écologique of the Ministère de l'environnement du Québec (special grant to Jean Malouin), by the Employment and Immigration Canada (PDE program), by the Département des sciences du bois et de la forêt, the Vice-dean's office for research (CTI program adaptation) and the Fonds d'enseignement et de recherche of the Faculté de foresterie et de géomatique of Université Laval, by Natural Resources Canada, by the Office de la langue française du Québec, by the Ministère des ressources naturelles, de la faune et des parcs du Québec, including its Direction des inventaires forestiers and especially Jean-Pierre Saucier, by Agenda forestal hondureña supported by Pro-Mesas program (CIDA), by Cascades, by Norampac and by the Société du Dictionnaire mondial des arbres. This work has been realized at Université Laval, Québec, Canada.

This dictionary attempts to present, in alphabetical order of the currently accepted Latin names, all known genera, species, subspecies and varieties of trees, excluding fossil and more recently extinct taxa, hybrids and cultivars. Separated indexes of Latin synonyms, English, French, Spanish, and other possible names and trade names are also provided. All taxa are numbered consecutively. This last number appears in all indexes permitting rapid and easy cross-referencing.

The definition of a tree follows essentially Little Jr. (1979: 3). A tree is defined as a woody plant, with a single, erect and persistent stem of at least 10 cm in diameter, measured at 1.3 m above the mean ground level, and with a total height of at least 5 m. A crown of leaves may be more or less well defined. Willows (*Salix*), birches (*Betula*), palms (Palmae) and bamboos (*Bambusa*, *Guadua*), with several stems branching from the same root system, as well as cacti (Cactaceae) are considered as trees, provided that they meet the diameter and height criteria.

Only the indigenous trees of a continent, those wild species that were natural elements of the spontaneous forest vegetation before the arrival of Europeans or other colonizers are included.

Each generic entry includes the family, according to Cronquist (1981) as modified by Mabberley (1993), to which the genus is assigned, the synonyms of Latin name, and English, French, Spanish, trade and other names. For English and French names, the standard name is listed first, followed, in alphabetical order, by additional available names, transcribed such as they were found in literature, with the country where they are used in parentheses. Where the names in other languages are listed, the parentheses indicate the language and the country where they are used.

Each infrageneric (species, subspecies, variety) entry includes, in addition, the distribution, height, type of foliage, ecological characteristics and main uses of the tree when available. Please note that the content of the section *dr* is for informational purposes only. The author is not liable in any way for the results of medicinal uses mentioned in this book. The reader assumes any and all risk of damage, injury, death, or any other inconvenient related to the content found herein.

Abbreviations for authors' names follow Brummitt & Powell (1992).

In this first volume only taxa native to the North American continent are included. North America is comprised in the global geographical and not political sense. That means from Alaska and Greenland to Panama, including the Caribbean, but excluding Hawaii. It is divided into 9 zones (Figure, p. xiv).

For users unfamiliar with the condensed style of dictionaries such as this, the following generic and specific name entries are set out *in extenso* as examples to aid comprehension.

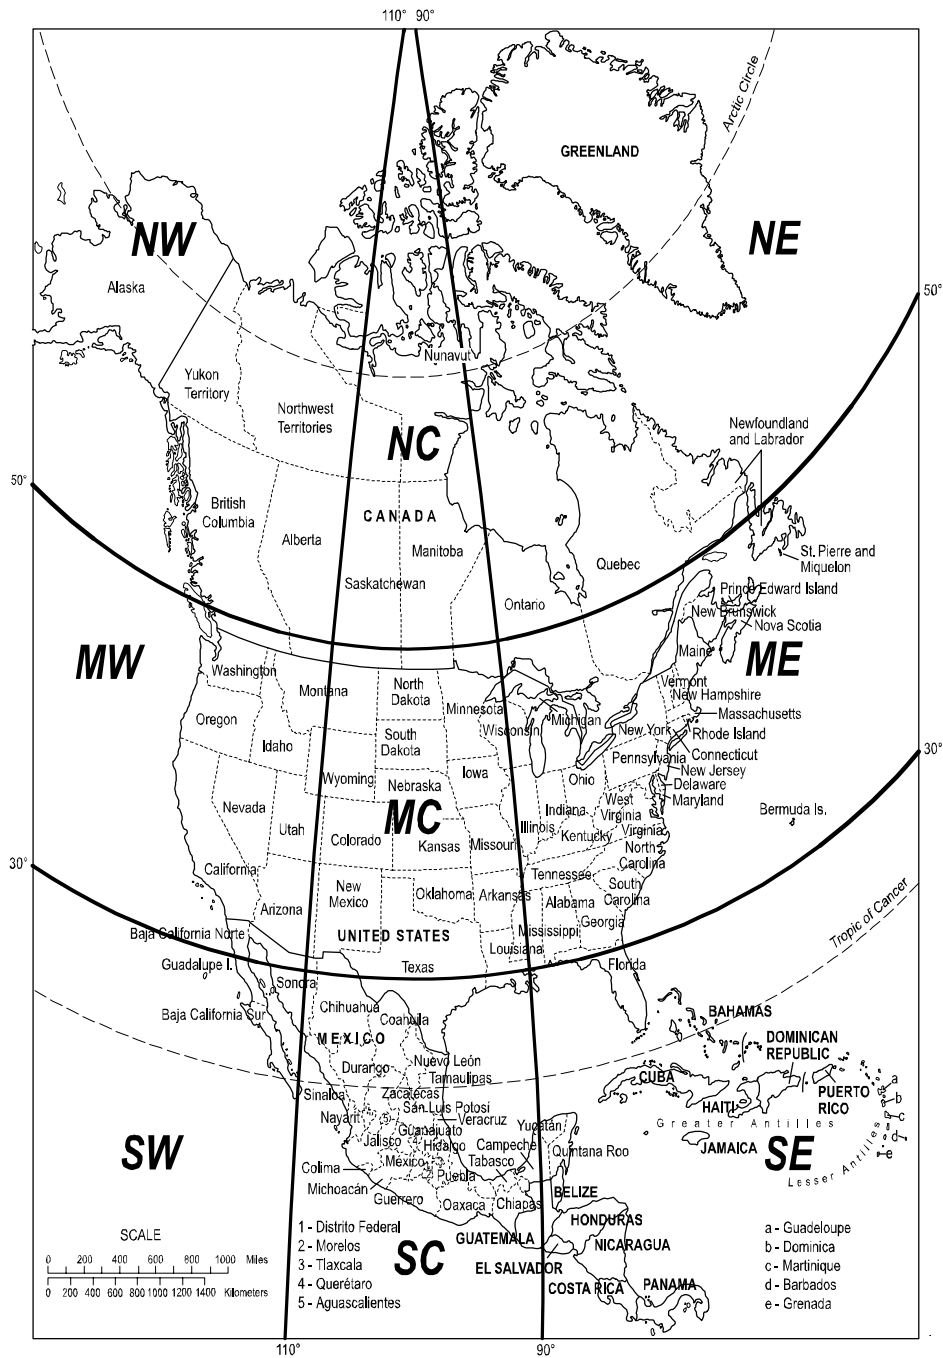

## 25 **Abies** Mill.

Pinaceae

*Abies* Link

*Picea* D.Don

*Pinus* L. p.p.

Map of North America

- e* fir; larch (ob), she balsam (USA); silver fir;  
single spruce (ob) (Canada)
- f* sapin
- s* abete, bansú, cipreso, guayame, huallame  
(Mexico); jolacote (Guatemala, Mexico);  
oyamel, pinabete, pino (Mexico)
- o* abete (italian); acxoyotl (Mexico);  
akruptunark (tchiglit, Canada and USA);  
anénadek, chinkop (algonquin, Canada);  
Edeltanne (german); ênénadek (algonquin,  
Canada); ilnashk (montagnais, Canada);  
nappartork (tchiglit, Canada and USA);  
Tanne (german); xalócotl (Mexico)

Taxon number 25, genus *Abies*, described by Philip Miller (1691-1771). Family Pinaceae. Synonyms: *Abies* described by Johann Heinrich Frieddrich Link (1765-1851), *Picea* by David Don (1799-1841) and partly *Pinus* described by Carl von Linnaeus (1707-1778). English names: fir is the standard name, larch (obsolete name) and she balsam are common names used in the United States of America, for silver fir the country is unknown and single spruce (obsolete name) is used in Canada. French name: sapin is the standard name. Spanish names: there is no standard name, abete, bansú, cipreso, guayame and huallame are all used in Mexico, jolacote is used in Guatemala and Mexico, oyamel, pinabete and pino are all used in Mexico. Other names: there is no standard name, abete is an Italian name, acxoyotl is a name of unknown language used in Mexico, akruptunark is a Tchiglit name used in Canada and in the United States of America, anénadek and chinkop are Algonquin names used in Canada, Edeltanne is a German name, ênénadek is an Algonquin name used in Canada, ilnashk is a Montagnais name used in Canada, nappartork is a Tchiglit name used in Canada and in the United States of America, Tanne is a German name and xalócotl is a name of unknown language used in Mexico. No trade name is known from this genus.

#### 44 ***Abies lasiocarpa*** (Hook.) Nutt.

Pinaceae NW MW North America (USA:  
Alaska, Washington to California, Canada:  
Yukon Territory, British Columbia) int NW  
MW Eurasia (Iceland, Sweden, UK) L E sci  
[hel] hyg->[xer] calc acid *dr(ob)* (needles:  
air sweetener, baby powder, ointment and  
perfume) *fd(ob)* (resin: chewing gum) *fr*  
(bark: deer) *fw* (fuel) *ma(ob)* (resin: to repair

protection and rehabilitation) *ti* (boxes,  
construction, crates, doors, food containers,

- framing, mill products, planing, shingles)  
*Abies balsamea* subsp. *lasiocarpa* (Hook.) Boivin  
*Abies balsamea* var. *fallax* (Engelm.) Boivin  
*Abies lasiocarpa* Lindl. & Gordon  
*Abies lasiocarpa* (Hook.) Nutt. var. *lasiocarpa*  
*Pinus lasiocarpa* Hook.
- e* subalpine fir; alpine fir (Canada); balsam,  
 balsam fir p.p., caribou fir, corkbark fir,  
 mountain fir; Rocky Mountain fir (Canada);  
 sweet-pine, western balsam; western balsam  
 fir (Canada); white balsam, white balsam fir,  
 white fir p.p.
- f* sapin subalpin; sapin blanc d'Amérique;  
 sapin concolore p.p. (Canada); sapin des  
 Alpes, sapin des montagnes, sapin des  
 Montagnes Rocheuses (Canada)
- s* pino real blanco, pino real blanco de las  
 sierras
- o* abete delle rocce, abete subalpino (italian);  
 Felsengebirgstanne, Felsentanne (german)

Taxon number 44, *Abies lasiocarpa*, species described by Thomas Nuttall (1786-1859) in its present form; however epithet *lasiocarpa* was used before by William Jackson Hooker (1785-1865) with the genus *Pinus* for *Pinus lasiocarpa* Hook. Family: Pinaceae. Naturally distributed as native species in Northwest and Middlewest North America, more specifically in United States of America (Alaska, Washington to California) and Canada (Yukon Territory, British Columbia) and introduced in Northwest and Middlewest Eurasia more specifically in Iceland, Sweden and United Kingdom. Large tree (from 20.1 m to 60 m), with evergreen foliage, sciaphilous (shade tolerant) or, less frequently, heliophilous (shade intolerant) species. Growing well from wet (hygrophilous) to, less frequently, dry (xerophilous) sites. Well adapted to calcareous soils (calciophilous) and acidic (pH lower than 6.5) soils (acidiphilous). Amerindians used it in the past as a drug, needles were used to make baby powder, also for perfumes, ointments and to sweeten the air, and resin was used as chewing gum. The bark serves as fodder for deers. The firewood serves as fuel. Resin was used in the past as a material to repair canoes. The tree is used in plantation and for pulp and paper purposes. It is also used in soil improvement, for landscape and watershed protection and land rehabilitation. Its timber serves for boxes, construction, crates, doors, food containers, frames, mill products, planing and shingles. Synonyms: *Abies balsamea* subsp. *lasiocarpa* described by Louis Hyacinthe Boivin (1808-1852), *Abies balsamea* var. *fallax* described by Boivin too, *Abies lasiocarpa*, species described by John Lindley (1799-1865) and Georges Gordon (1806-1879), *Abies lasiocarpa* var. *lasiocarpa* described by Thomas Nuttall (1786-1859) and *Pinus lasiocarpa*, described by William Jackson Hooker (1785-1865). English names: subalpine fir is the standard name; the remaining are the other common

names of which western balsam fir is used in Canada and balsam fir and white fir are in part (*pro parte*) used for this species and in part for other species. French names: sapin subalpin is the standard name; the remaining are the other common names mostly known from Canada of which sapin concolore is in part (*pro parte*) used for this species and in part for other species. Spanish names: there is no proposed standard name; there are just common names. Other names: there are no proposed standard names; abete delle rocce and abete subalpino are Italian names, Felsengebirgstanne and Felsentanne are German names. No trade name is known for this species.
